NIHAR HARDE

Data Science Undergraduate | Agentic AI, GenAI & Data Engineering
+91-7888043666 | hardena@rknec.edu | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Science undergraduate with hands-on experience building **agentic AI pipelines**, **GenAI/RAG systems**, and data engineering solutions using **Python** and **SQL**. Experienced across the full delivery cycle, from solution design and prototyping through multi-agent orchestration to stakeholder-ready insights.

EDUCATION

Shri Ramdeobaba College of Engineering, Nagpur — Aug 2023 – May 2027
Bachelor of Technology, Computer Science and Engineering (Data Science) — CGPA: 8.33 / 10.00

The Royal Gondwana Public School — April 2023
Higher Secondary Education — Percentage: 83.4%

Bhavan's B.P. Vidya Mandir, Ashti — April 2020
Primary and Secondary Education, CBSE — Percentage: 87.8%

PROJECTS

Brief2Reel – Agentic AI Content Automation Pipeline — Jun 2026 – Present
Python, FastAPI, ChromaDB, Multi-Agent Systems, Groq, Gemini

- Own the **Backend/Agents** track within a four-person team building an agentic AI pipeline that turns a structured product brief into a brand-voice-grounded short video and caption, subject to human approval, for publishing to **Instagram Reels, Facebook, and YouTube Shorts**.
- Designed and implemented the **multi-agent orchestration** pipeline in **FastAPI**, sequencing **Copywriter, Design, Audio, Video Compositor, and Critic/QA** agents with retry handling and human-in-the-loop review checkpoints to maintain output quality and brand consistency.
- Engineered **RAG-based** brand-voice grounding with per-niche **ChromaDB** collections, a repetition-scoring mechanism, and a traceability and persistence layer for auditability of generated content.
- Delivered core backend functionality within an **8-week, zero-budget** timeline while collaborating cross-functionally with the **Frontend, Infra/DevOps/Publishing, and QA/Evaluation** tracks.

Team Lead – Multi-lingual RAG System — Jan 2026 – Jun 2026
NLP, Retrieval-Augmented Generation (RAG)

- Designed a Legal Information Retrieval & Decision Support System using a **Retrieval-Augmented Generation (RAG)** framework to enable context-aware legal query answering.
- Developed a semantic retrieval pipeline using **FAISS** vector indexing and integrated a **FLAN-T5** language model via **LangChain** for grounded legal response generation.
- Preprocessed and chunked legal documents, created a **Streamlit** web interface for querying, and evaluated system performance using retrieval metrics and the **RAGAS** framework.

Transaction-Level Data Pipeline & Analytics – FMCG Domain — Nov 2025
Databricks, PySpark, SQL, Delta Lake

- Architected the core end-to-end data pipeline on **Databricks** for transaction-level FMCG supply chain datasets, implementing **medallion architecture (Bronze to Silver to Gold)** to transform raw records into analytics-ready tables.
- Wrote **SQL** queries to answer business questions on supply chain performance, uncovering root causes behind delivery delays and inventory discrepancies.
- Collaborated with a teammate to design **data quality validation and monitoring** checks across the pipeline.

Customer Segmentation — Sep 2025
scikit-learn, Seaborn

- Built an end-to-end customer segmentation system using **RFM (Recency, Frequency, Monetary)** analysis and **K-Means clustering**, selecting the optimal number of clusters via the **Elbow Method and Silhouette Score**.
- Labeled clusters into actionable segments (Retain, Re-Engage, Reward, High-Value, At-Risk) and visualized them through dashboards to support data-driven marketing and retention decisions.

TECHNICAL SKILLS

- **Languages:** Python, Java (OOP), C
- **Agentic AI & GenAI:** LangChain, Multi-Agent Systems, Retrieval-Augmented Generation (RAG), FastAPI, ChromaDB, FAISS, Groq, Gemini, Hugging Face Transformers, Prompt Engineering
- **Machine Learning & Data Science:** scikit-learn, PyTorch, TensorFlow, Pandas, NumPy, Matplotlib, Exploratory Data Analysis (EDA), Power BI
- **Data Engineering & Databases:** SQL, MySQL, PostgreSQL, Databricks, PySpark, Delta Lake
- **Tools:** Git, VS Code, Jupyter Notebook, Streamlit, MS Excel
